Abstract

Language teaching is a kind of an art which everybody can learn at any level. Languageis a tool for a good communication and through language we express our views to others. In this way, learning process in language is highly preferable to all, in knowing such new languagewith the help of current teaching technology that are used in teaching. the present scenario, language teacher uses many types of teaching tools to inspire the student`s learning. This paperparticularly deals with the impact of teaching technology in language teaching in terms of different aspects. It explains about the teaching technologies that creates highly advantaged system of easy learning of mother tongue at school level..

KEYWORDS:

Language, teaching, learning, process, technology, learner

Introduction:

Language is a powerful weapon to interpret one's ideas, thoughts and knowledge wherewe can assume such good quality of learning process. Here we focus on the impact that createstowards the teaching technology in language teaching. In ancient days, the language teacher did not get any kind of facilities to enhance the development of language teaching expect theirknown props like stick, sand, and some other props. Then the Twenty first century has developed immensely and has grown in many levels of using the teaching technologies.

Language teaching:

Language teaching is a kind of acknowledging something that creates a new idea in knowing some other language. Initially a language teacher has too familiar with the language, especially in social and cultural background. So that he/she may teach the language fluently to the learners. Here we find some big gap regarding with teachers and learners, while learn the mother tongue.

Through language teaching we regenerate the basic structures of its own nature by teaching it. Because of high interest in learning a language, many of us gain knowledge and power in our own working stations where ever we work. Robert Lado describes certain principles for language teaching that helps the intense of learning language. The principles will lead us to teach the language by using various current teaching technology in teaching language.

Earlier language teaching had not had this much of advantage in using technology. But the present years, we see lot of teaching tools and technologies in language teaching as well as in various teaching activities. The 90's kids were not admitted to use such technologies in there days. We were asked to read by book and automatically we memorize the context messages, and we omit it in the exam papers. This was the past language learning history of 90's kids. That time, we might have not used such a teaching and learning technologies.

Now the present are education system has totally changed in using different kind of technologies and make the learner to be active at any time of their activities.

Smart class room

Maximum in all the schools, there may be at least one smart class room in the school and rest of the aided and private schools fully provided and equipped with number of smart class rooms in their school. The smart class room facility gives a different kind of atmosphere in learning language as well as teaching language. It will be very easier for the language to deliver his\her ideas, views and messages about the particular language.

The language teacher makes a programme and sets in the system display all the content of the language. The basic details to extreme level of the language detailly will be given as data and the students were asked to follow the smart board while the language teacher teaches the languages. It is also very hard for the language teacher, that carrying a book let and preparing kinds by physically like chart, flash cards, and other materials. Indeed, of carrying all these, everything will be programmed in the system. When we start to teach the language, automatically all content of the message will be fall down on the smart board and it will be visible on the board.

Smart phones:

Smart phones are playing major role in language teaching and it is also one of the main technologies that helps a lot in learning various process. The smart phone culture has increased a huge amount of usage in all the level of learning activity. Even the students and teachers have to use smart phones for mainly online and offline more teaching and learning process.

This is an advanced technology being used in various set of activities, which emerge the collection of learning process. The technology for teaching and learning purposes and not allowed to use also but the present teaching, learning culture, everybody should have the smart phones and have to use them in their class hours to explain and develop the learning skill among the students.

Smart phone usage has developed consistently in all the fields even in the higher education too. Particularly in the engineering and medical fields we could see a lot of usages regarding with these types of smart phone technology for describing and demonstrating the concepts. By using this technology, the input knowledge has increased a lot to the subject learners. Though it has come for the communication purpose only, but the present days it is important to become large in using this smart phone technology.

Digital displays

The digital displays also one of the main technologies in teaching and learning process where we can see number of framed sentence and word structures are displayed in the digital board. Through this digital board, letters, words and sentences are being taught to the students in the schools. The main and sub entrances there will be digital boards where always running some matters related to that language that can be always visible to the language learners to remember the concept.

If a language learner wants to learn a language means, he / she has to learn not only the basic structures of language but also social and cultural back rounds of the language. To explain the cultural concept of the language, we can portrait some related pictures and videos on the digital board and make them to understand about the language.

This technology is being used for all the level of accruing knowledge in the schools and in social environments. A candid visible could be seen through digital displays, and it always makes a remembrance of the message what we see on the digital displays.

ICT Corner

The ICT [Information and Communication Technology]

Advantage of teaching technologies:

We have been using many kinds of technologies for adamic purposes to develop the knowledge of the students. We seek for good advantages in using teaching technologies in order to define the constant in developing the learning skills. Students practice interpersonal skills as they interact by video, audio or some text materials from the websites.

Quick access to information:

Similarly, if we try seek some related details of particular subject, we need not go through any kind written text like book materials. Early we can access the information throughour technology.

Save time:

The time management is much needed in the academic fields, to success in our goal. We get quick response in searching some messages that related to our need. We can save our time and can enhance our ability in learning some new things.

Good communication process:

The current teaching technologies help the learners to have a good communication process in all the level frequently we use to send many messages through using current technologies. Particularly in language teaching process attempts a huge usage in communication process in the class rooms.

Learning efficiency:

The language learning efficiently is more when we compare with the previous learningactivity that had taken for language teaching. The quality of learning efficiency increased by using teaching technologies. It always enables the learner to maintain the level of learning capacity.

Better learning technologies:

While we learn the language, we may find it to be very earlier for learning that language.The current teaching aids focus on better language teaching skill in all the levels. It always brings out good success in learning actives by using the current teaching technologies.

Disadvantages in using current technologies:

There are some disadvantages also being found in the current teaching technologies. Through we get informative and fast access in all the level of accruing knowledge from different terms in the curriculum bares. But through using the technology as electronic mode, the devices brightness may affect the night of the learners and it leads to lose their sight. There are some students addicted to the technologies and often used to go through the internet and wasting their time unnecessarily the lead amount for using internet also one of the main defects in using current teaching technologies.

Findings of this paper:

The impact of current teaching technologies always will be helpful for the learner of language and other activities too. Every day we come across lot of innovative technologies are being used for learning process in the school and the public sectors. The usages of technologies have increased a lot and will gain the fruit of knowledge in the society. The impact created by the current technologies in the language teaching fields' immensely fabulous change.

Conclusion:

We the people used many kinds of learning activity in the school previously. But the present technologies have gone through may side area and occupied the teaching fields too. So, we have to accompany with growth that has taken place in the modernity of new technologies. The positive vibrant of new technologies will lead the young generation to taste the better life in the world.
